VigilOffice

Third Assignment
IoT Lab

Alessandro Maifredi 851610
Qazim Toska 847361

VigilOffice

Objectives

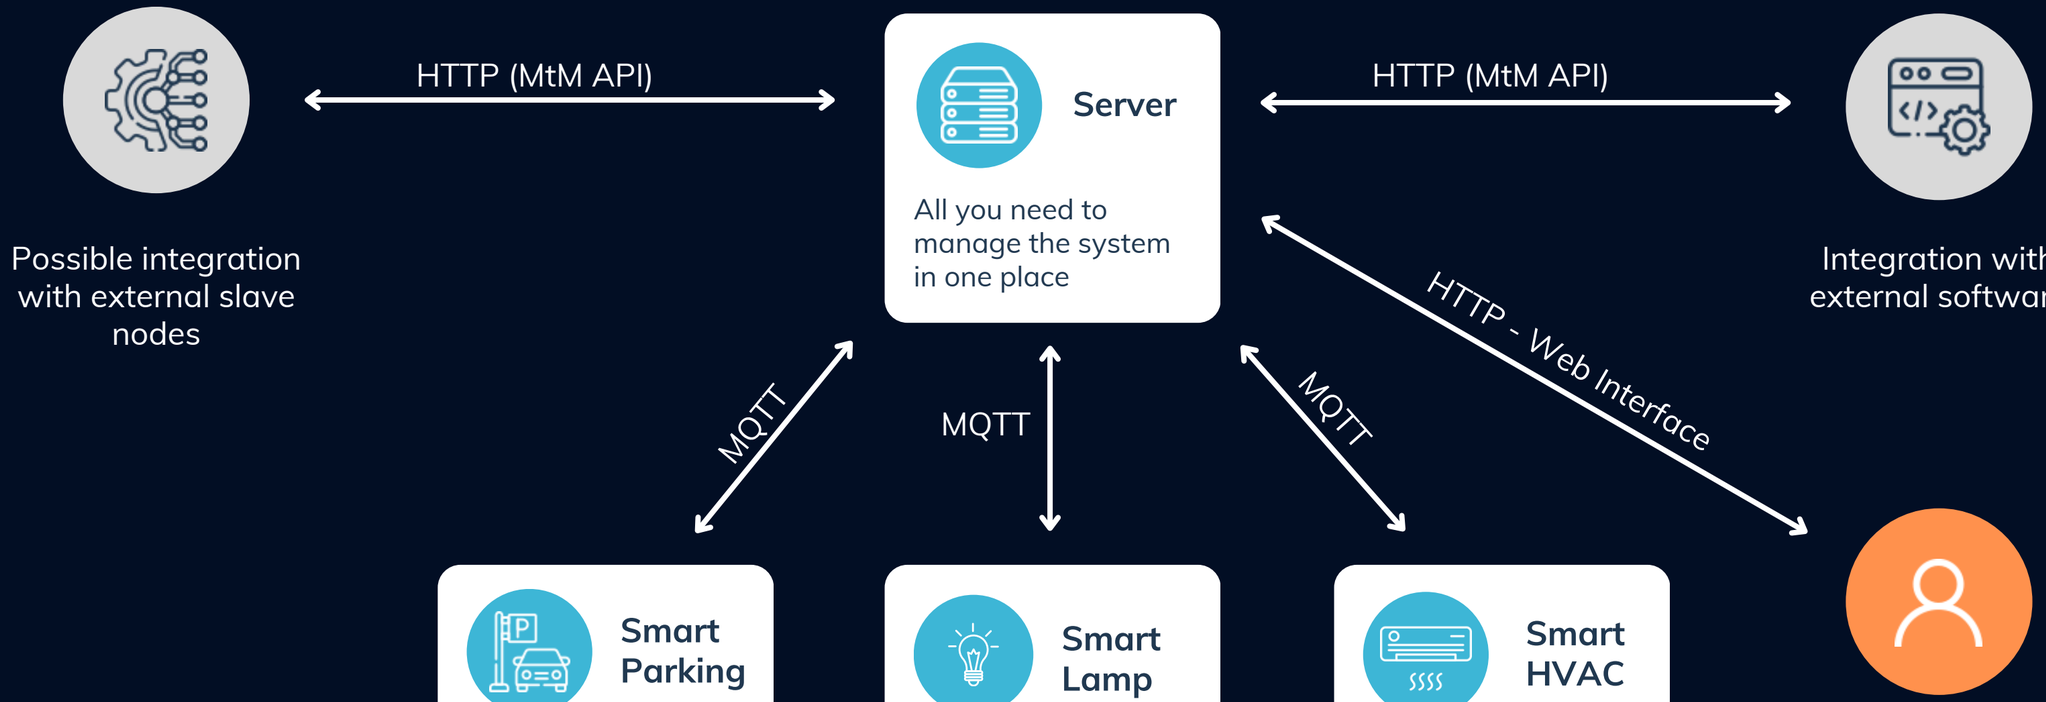
01 Real time office monitoring

02 Dynamic management of devices

03 Control from Master node

VigilOffice

The VigilOffice System



VigilOffice

Parking Node’s sensors and actuators

Avoidance sensor

Flood sensor

Flame sensor

LED

VigilOffice

Lamp Node’s sensors and actuators

LED

Movement sensor (pir)

Flame sensor

Light sensor

VigilOffice

HVAC Node’s sensors and actuators

Temperature sensor (DHT11)

Humidity sensor (DHT11)

Flame sensor

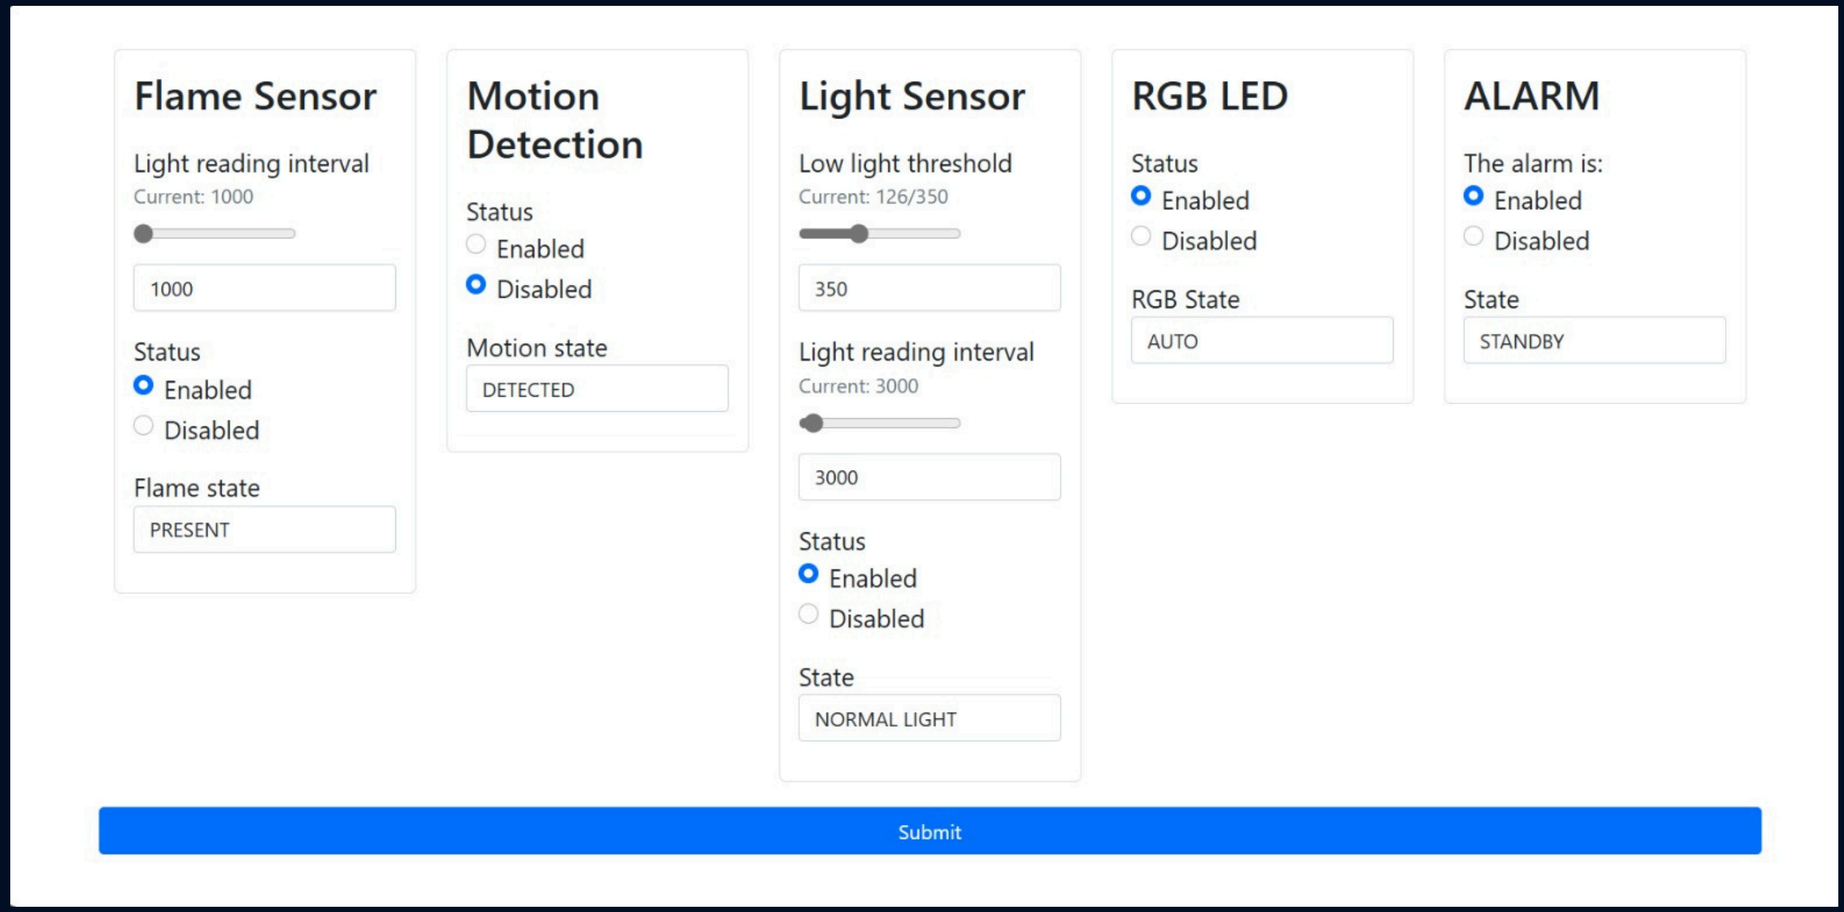
MQTT in depth

VigilOffice

Topic	Method	Operation	Payload
/welcome	subscribe	Get the **register** topic	{registerTopic: “vigiloffice/register”}
/register	**publish**	Introduce to the master	{macAddress:“MAC”, type:“TYPE”}
/register/MAC	subscribe	Get **status** and **control** topic	{statusTopic:“vigiloffice/TYPE/MAC/status”, controlTopic:“vigiloffice/TYPE/MAC/control}
/TYPE/MAC/status	**publish**	Publish device status	Device status json message (see appendix)
/TYPE/MAC/control	subscribe	Receive configuration	Device control json message (see appendix)
/lwt/MAC	**publish**	Send lwt message	Device status json message (see appendix)

VigilOffice

Control everything from the Web Server



VigilOffice

Not only User to Machine

Parking status

```
{
    "type": "parking",
    "macAddress": "2a:2b:2c:3d:3e:3f",
    "floodingSensor": {
        "status": 0,
        "enabled": true,
        "highThreshold": 100,
        "interval": 1000
    },
    "flameSensor": {
        "status": 0,
        "enabled": true,
        "interval": 1000
    },
    "avoidanceSensor": {
        "status": 0,
        "enabled": true
    },
    "rgbLed": {
        "status": 0,
        "enabled": true
    },
    "alarm": {
        "status": false,
        "enabled": true
    }
}
```

Register device

```
{
    "macAddress": "1a:2b:3c:4d:5e:6f",
    "type": "lamp"
}
```
